

0.1 Question 1b: Visualization

To make plotting easier, create a plotting function.

```
In [6]: def draw_img(img_vector, h=img_height, w=img_width):  
        plt.imshow(img_vector.reshape(img_height, img_width), cmap=plt.cm.gray)  
        plt.xticks()  
        plt.yticks()
```
